

What is claimed is:

1. A business position display system for illustrating a position in business environment of a business unit to be analyzed, comprising:

5 a storage device for storing evaluation values respectively set to a plurality of evaluation factors, for every business unit to be analyzed;

 an extracting processor extracting evaluation values related to said business unit to be analyzed out of said storage
10 device in accordance with a predetermined extracting condition;

 a coordinate calculating processor calculating coordinates in a multi-dimensional space in accordance with respective evaluation values extracted by the extracting processor; and

15 a display processor showing an object at a position corresponding to the coordinates calculated by said coordinate calculating processor in said multi-dimensional space on a screen.

2. The business position display system according to claim 1,
20 wherein

 said storage device stores the evaluation values in a multi-dimensional database in which a multi-dimensional space is logically defined with a plurality of axes respectively representing reference, said evaluation value being positioned
25 in accordance with logical position of its attribute on each

axis, and

said extracting processor extracts an evaluation value of which logical position of its attribute on each axis corresponds to the extracting condition.

5 3. The business position display system according to claim 2, further comprising condition setting device for arbitrarily setting said extracting condition.

4. The business position display system according to claim 2, wherein

10 at least one of the axes logically defining a multi-dimensional space in said multi-dimensional database includes a plurality of elements concerning references which have relationship of a layered structure with each other.

15 5. The business position display system according to claim 2, wherein

said coordinate calculating processor calculates, when said extracting processor extracts evaluation values related to a plurality of business units, a plurality of the coordinates for respective business units in accordance with said
20 evaluation values, and

said display processor shows, when a plurality of coordinates are calculated by said coordinate calculating processor, a plurality of objects at positions respectively corresponding to the coordinates.

25 6. The business position display system according to claim 2,

wherein

when a predetermined tallying condition is satisfied between a plurality of evaluation values extracted by said extracting processor, said coordinate calculating processor tallies up the evaluation values satisfying said tallying condition to calculate a new evaluation value and thereafter calculates coordinate in accordance with the new evaluation value.

7. The business position display system according to claim 1,

10 wherein

the multi-dimensional space in which said object is shown by said display processor is a two-dimensional space defined by rectangular coordinate system.

8. The business position display system according to claim 7,

15 wherein

said respective evaluation factors are roughly classified into those related to environmental stability of industry, market strength, competitive advantage of a business unit to be analyzed, and financial strength of the business unit to be analyzed, and

20

said coordinate calculating processor calculates coordinate on a first axis constituting said rectangular coordinate system in accordance with evaluation values of evaluation factors related to said market strength and said competitive advantage of the business unit to be analyzed, and

25

coordinate on a second axis constituting said rectangular coordinate system in accordance with evaluation values of evaluation factors related to said environmental stability of the industry and said financial strength of the business unit to be analyzed.

9. The business position display system according to claim 7, wherein

said respective evaluation values are roughly classified into those related to a process viewpoint, an organization and personnel viewpoint, a stockholder viewpoint, and a customer viewpoint, and

said coordinate calculating processor calculates coordinate on a first axis constituting said rectangular coordinate system in accordance with evaluation values of evaluation factors related to said process viewpoint and said organization and personnel viewpoint, and coordinate on a second axis constituting said rectangular coordinate system in accordance with evaluation values of evaluation factors related to said stockholder viewpoint and said customer viewpoint.

10. The business position display system according to claim 2, wherein

in said multi-dimensional database, said respective evaluation values are classified, according to evaluation factor axis representing reference about types of respective evaluation factors, into a first group comprising those related

to environmental stability of industry, market strength,
competitive advantage of the business unit to be analyzed and
financial strength of the business unit to be analyzed, and a
second group comprising those related to the process viewpoint,
5 the organization and personnel viewpoint, the stockholder
viewpoint and the customer viewpoint, and

said extracting processor selectively extracts only
evaluation values of evaluation factors belonging to either one
of said first group or said second group in accordance with an
10 extracting condition as to said evaluation factor axis.

11. A computer-readable medium for storing data of evaluation
values respectively set to a plurality of evaluation factors
for every business unit to be analyzed, and a program making
computer:

15 extract an evaluation value related to the business unit
to be analyzed in accordance with a predetermined extracting
condition;

calculate coordinates in a multi-dimensional space in
accordance with the extracted evaluation value; and

20 output a image data for showing an object at a position
corresponding to said calculated coordinates in the multi-
dimensional space on a screen.
